## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 5-7, 10, 14, & 16-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Drysdale et al. (U.S. Patent No. 6058102) in view of Smith et al. (U.S. Patent No. 6452905).
- With respect to claims 5-7, 10, 14, & 16-18, Drysdale teaches a method for controlling congestion in a network (e.g. data transmission system between end user sites) having a plurality of switching points comprising: maintaining a plurality of service level agreements at a first switching point, each SLA having a corresponding minimum data rate (col. 4, lines 7-9); transmitting data packets corresponding to each SLA at or above the minimum data rate in accordance with the respective SLA (col. 5, lines 13-19); receiving a message from a second switching point at the first switching point to indicated that traffic between a source and a destination is congested (col. 6, lines 66-67; col. 7, lines 1-8). Drysdale fails to teach adjusting a data rate at which packets corresponding to an SLA, destined for the destination, are output from the first switching point in response to receiving the message to reduce the congestion. Smith teaches receiving the feedback of congestion for reducing the flow (col. 11, lines 30-35).

  Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to implement the method of feedback control of in Smith's

Application/Control Number: 09/189,819

Art Unit: 2666

invention into Drysdale for controlling the data rate to avoid congestion and meeting the SLA with customers.

- 3. Claims 8 & 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Drysdale et al. (U.S. Patent No. 6058102) and Smith et al. (U.S. Patent No. 6452905) in further view of Jorgensen (U.S. Patent No. 6452915 B1)
- With respect to claims 8, & 13, Drysdale and Smith disclose all the aspect of the claimed invention as set forth above but fails to teach wherein maintaining SLAs further comprises separating the data packets into different queues corresponding to each different SLA. Jorgensen discloses different queues for different SLA (col. 62, lines 34-47). Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to implement the method of different queues to different SLA for controlling and processing a plurality of signal in communication system.

## Conclusion

- 4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- Drysdale et al. (U.S. Patent No. 6058102) discloses method and apparatus for performing service level analysis of communications network performance metrics.
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to PHUC H TRAN whose telephone number is (703) 308-7471. The examiner can normally be reached on M-F (8-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, RAO SEEMA can be reached on (703) 308-5463. The fax phone numbers for
